CRYPTO CURRENCY

A Cryptocurrency Is A Digital Or Virtual Currency That Is Secured By Cryptography, Which Makes It Nearly Impossible To Counterfeit Or Double-spend. Many Cryptocurrencies Are Decentralized Networks Based On Blockchain Technology — A Distributed Ledger Enforced By A Disparate Network Of Computers. A Defining Feature Of Cryptocurrencies Is That They Are Generally Not Issued By Any Central Authority, Rendering Them Theoretically Immune To Government Interference Or Manipulation.

BLOCKCHAIN TECHNOLOGY

Blockchain technology is an advanced database mechanism that allows transparent information sharing within a business network. A blockchain database stores data in blocks that are linked together in a chain. The data is chronologically consistent because you cannot delete or modify the chain without consensus from the network. As a result, you can use blockchain technology to create an unalterable or immutable ledger for tracking orders, payments, accounts, and other transactions. The system has built-in mechanisms that prevent unauthorized transaction entries and create consistency in the shared view of these transactions.
